EDUCATION

Rensselaer Polytechnic Institute (RPI) Troy, NY <i>PhD of Computer Science, Full Scholarship for the entire program</i>	August 2025 – Present
Rensselaer Polytechnic Institute (RPI) Troy, NY <i>Master of Computer Science, Full Scholarship for the entire program</i>	Sept. 2023 – Dec. 2024
Tsinghua University Beijing, China <i>Master of Engineering in Automation</i>	Aug. 2019 – Jan. 2023
National Central University Taoyuan, Taiwan <i>Bachelor of Science in Mechanical Engineering</i>	Sept. 2015 – June 2019

SKILLS

Programming Languages:	Python, C, Java, MATLAB, JavaScript, R, HTML/CSS, SQL
Software & Tools:	Linux, Git, GitHub, Ubuntu, SSH, Docker, GCP, Neo4j, Elastic Search, MCP
Libraries:	NumPy, Pandas, TensorFlow, Pytorch, Scikit-learn, React, Deepspeed, Langchain
Others:	Distributed Computing, Retrieval Augmented Generation (RAG), AI agents, RoG

WORK EXPERIENCE

AI Scientist Deeli AI CA	April 2025 – Jan. 2026
- Designed and implemented a large-scale knowledge graph construction pipeline encompassing 30M+ entities and 60M+ triples to enable hierarchical search capabilities; integrated Agentic graph-based reasoning to enhance result explainability and reliability - Optimized a hybrid PostgreSQL and Agentic search system by engineering targeted query optimization algorithms, achieving a 40% reduction in query latency while improving retrieval accuracy	

PROJECTS EXPERIENCE

Streaming Knowledge Graph Clustering for Construction RPI	Oct. 2025 – Present
- Architected SMVGC, an inductive multi-view graph clustering framework leveraging view-specific GNNs, a Transformer encoder for cross-view fusion, and contrastive learning for robust entity embeddings - Deployed a lightweight projector network for real-time entity resolution and community detection in streaming KGs, eliminating retraining overhead and accelerating KG construction - Validated on 6 benchmark datasets, demonstrating consistent robustness and efficiency across diverse settings	
Teacher-Student Knowledge Distillation for Protein Sequence Curation RPI	Feb. 2025 – Present
- Designed a contrastive data curation framework where a frozen teacher Protein Language Model (PLM) scores biological sequence quality and an iteratively updated student PLM identifies novelty gaps, jointly selecting high-value training sequences for efficient student fine-tuning - Demonstrated that strategic selection using 50% of training data outperforms random selection with 90–100% of data across intra- and cross-family ESM-2 model pairs, validated on 5 downstream benchmark tasks
